

safety, quality and reliability

understanding customer requirements

By working with our customers to understand their individual requirements, Tevo supplies practical, high quality storage solutions for a wide range of operational environments and industries. Our commitment to your business success is why some of the leading fleet operators rely on our products for their service vehicles.

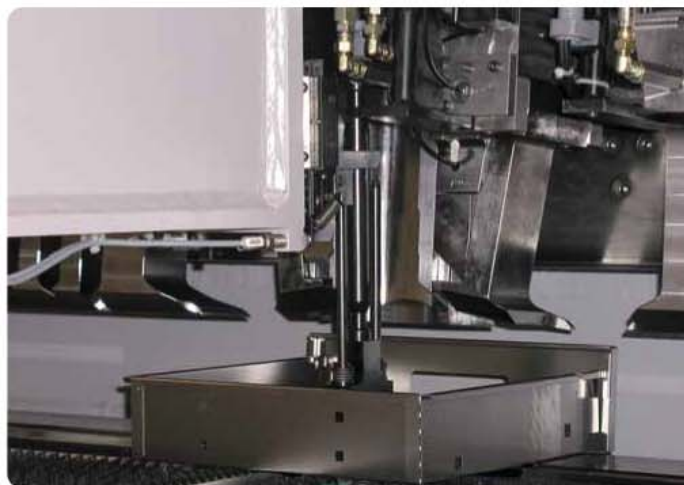

ongoing product development

Our extensive pre-production facility, including the latest Computer Aided Design and Computer Simulated Product Testing, ensures that newly designed or modified components will integrate seamlessly with the modular range.

looking after the environment

Tevo's commitment to the environment starts with using recyclable materials, including plastics, steel and aluminium, as well as making sure that our manufacturing processes are energy efficient.

state-of-the-art manufacturing

Our high quality racking systems are built to last using some of the most advanced production technologies in Europe. Tevo's processes meet BS EN ISO 9001:2000 and are carefully monitored to ensure exacting standards.

testing for quality

At the design stage Tevo products are rigorously tested for quality and endurance, shelves and drawer units conforming to BS 4875: Part 7. 1998, Test Level 5, ensuring that the installed systems withstand the demands of prolonged use in a wide variety of service applications.

taking safety seriously

Comprehensive crash testing at specialist research facilities is part of Tevo's commitment to safety. Our ongoing safety programme constantly evaluates system strength and safety, to ensure the effectiveness of design and quality of manufacturing. Steel and aluminium racking systems undergo arduous safety testing in excess of 21G which exceeds the required rate for the ECE R17 standard. Tevo's crash tests have provided positive results which are vitally important to the ongoing development of the Tevo product range.

Driver safety is imperative and the fitting of bulkheads is recommended in all service vehicles. For the convenience of customers we offer this service prior to the installation of the racking system.

complete customer service

Our experienced sales professionals work with you to ensure that you select the most appropriate racking and storage solution for your business, providing full technical support and where necessary, detailed CAD images of proposed layouts.

Tevo racking systems may be supplied in kit form for self installation, or we offer the convenience of on-site fitting through our network of approved installers and our own mobile installation team.

Whether we're fitting a single system or providing a full conversion service for an entire fleet, we are committed to delivering an efficient and professional service at every stage of the process.
